Hospitality

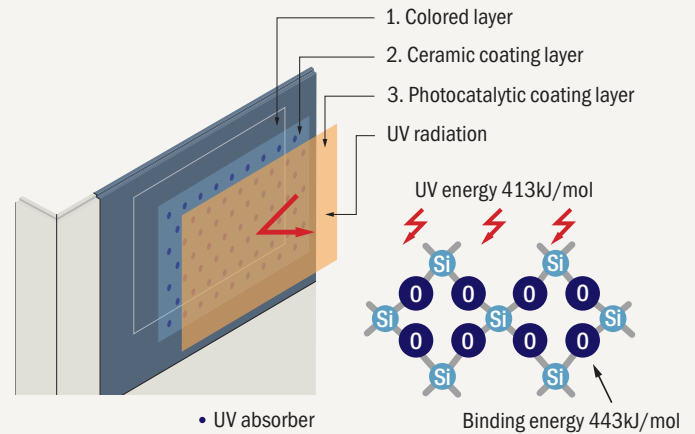

Multifamily Residential

Triple Coating Technology

- 1. COLOR LAYER** - Factory finish
- 2. CERAMIC COATING** - No color fading
- 3. PHOTOCATALYTIC COATING LAYER** - Self-cleaning, air purifying, anti-virus and anti-bacterial triple coating

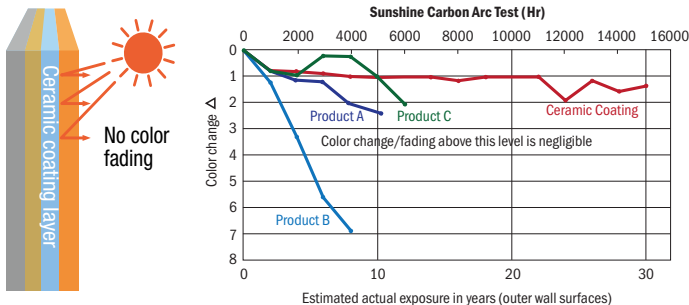

The main skeleton of the **CERACLAD** panel is 100% inorganic so bonding is stronger than the ultraviolet energy and there is almost no deterioration.

Ceramic Coating

CERACLAD's inorganic ceramic coating has excellent UV blocking properties to protect the color layer from ultraviolet rays and minimize fading of the outer wall.

20-year No-Fade Warranty

CERACLAD ceramic coated panels are available in proprietary colors and come with a 20-year color guarantee and 50-year structural guarantee.

Our Heritage

CERACLAD joint venture between industry titans **Panasonic Corporation** and **Kubota Construction Company**.

CERACLAD Rainscreen has a proven track record of performance nearing 40 years worldwide. Extensive research and technological advancement led to the development of proprietary Photocatalytic Ceramic Coatings, that provide superior color retention and self-cleaning performance and eliminate costly maintenance.

High performance siding systems designed for sustainable buildings and a healthy living environment.

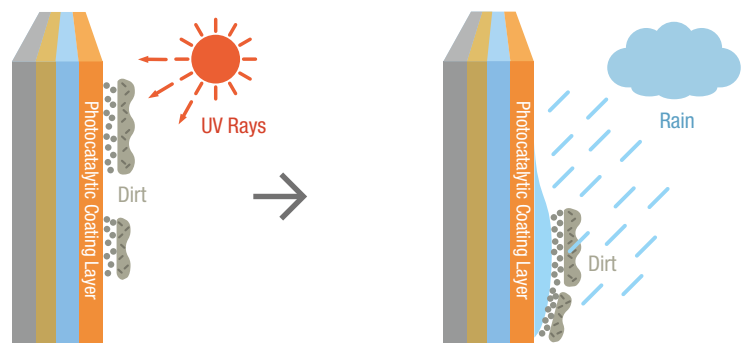

Photocatalytic Coating

Naturally Self-Cleaning - Sunshine Decomposes Dirt, Rain Washes it Away

Self-Cleaning 365 days a year

CERACLAD's photocatalytic coating is energized by the presence of light and transforms the coated surface to create a 'self-cleaning' functionality.

Decomposition power + Super hydrophilic property
